

IncuCyte™ ZOOM

Live Cell Imaging made easy

Smart Cell Analysis

Tue 6th of September – 2:00 pm

Centre Pierre Potier – Salle de séminaire

The IncuCyte Zoom™ system image your cells from within your incubator.

Automated for kinetic acquisition and analysis of cell proliferation, death, migration and many other phenotypes

IncuCyte™ ZOOM

Live Cell Imaging made easy

When live cell imaging is made easy, you can concentrate on what really matters to your research

Effortlessly image living cells over hours, days and weeks

- Non-perturbing, automated image acquisition
- Multiple imaging modes and magnifications
- Compatible with standard plates, dishes and flasks

Move through time-lapse images and make high definition movies with ease

Easily convert images into meaningful numbers and metrics

- Intuitive software provides powerful image analysis tools
- Images can be exported for analysis in third party software
- Remote viewing and data analysis from your desktop

Phase contrast

Phase contrast & Fluorescence

Overlay of analysis masks

Quickly visualize time-course data and score phenotypic cell biology

- Flexible graphing and data export capabilities
- Fully quantified kinetic measures
- Information rich images and movies

Compare time-courses and determine concentration dependent effects

Phenotypic kinetic applications

3D Spheroid

Angiogenesis

Apoptosis

Cell Culture QC

Chemotaxis

Clonal Dilution

Cytotoxicity

Neurite Dynamics – Label-Free

Neuronal Co-Culture - Fluorescence

Proliferation – Cell Count

Proliferation – Confluence

Reporter Gene

Scratch Wound Invasion and Migration

Stem cell monitoring & Reprogramming

Transfection Efficiency

Publications
